

## People Over Prompts – Episode 3 Show Notes

### **Who Owns AI-Generated Code When It Ships? Building a Chain of Human Accountability**

AI did not remove accountability; it diffused it across so many hands that no one owns the outcome. A three-layer model (individual, team, organizational) puts a named human on every AI-generated change that ships.

**Trusted AI in Product Development: Governance That Enables Speed.** Untrusted AI is not faster AI; it is expensive manual review with extra steps. Trust is something your governance earns for the model, through tiered acceptable use, human-in-the-loop checkpoints, and a light audit trail. ### **The Difference Between Governance That Protects and Governance That Just Slows You Down**

There are two kinds of governance. Protective governance reduces a specific, named risk. Theater governance creates the appearance of control without reducing actual risk. The job of a leader is not to choose between more and less governance; it is to tell the two apart before agreeing to build either.
